Saketh U

UX Designer
saketh0427@gmail.com | +1 3142814044

Professional Summary

- Having 4+ years of experience in **UX Design**, **Interaction Design**, and **UI Design** across **Healthcare**, **Banking**, and **Consulting** domains with strong focus on enterprise **SaaS** products and **AI**-assisted product development environments.
- Created **user flows**, **wireframes**, and **high fidelity designs** in **Figma** for complex enterprise workflows, improving task completion and reducing support tickets across web and mobile platforms.
- Applied **information architecture** and **interaction design** principles to restructure legacy **healthcare** portals, making **clinical data** easier for care teams to **find** and act on during daily rounds.
- Built and maintained **design systems** with **component libraries** and **design tokens** in **Figma**, helping engineering teams ship consistent UI across **React** and **React** Native applications.
- Conducted **usability testing** and **UX research** sessions with nurses, bankers, and consultants, turning **behavioral data** and **product analytics** into actionable design improvements.
- Partnered with Product Managers, Engineers, and **DesignOps** teams in remote, fast paced environments to align design decisions with business goals and technical constraints.
- Improved accessibility standards by applying WCAG guidelines and running **accessibility audits**, making enterprise **SaaS** interfaces usable for screen reader and keyboard-only users.
- Supported **AI assisted design tools** and **AI** prototyping workflows to speed up concept exploration and stakeholder reviews without compromising design quality or user needs.
- Documented **design system governance** processes, **design tokens** usage, and component library guidelines so new team members could contribute without breaking existing patterns.
- Delivered **responsive web design** and **mobile design** solutions for data-heavy dashboards, using **React** and **React** Native handoff specs that reduced developer back-and-forth during implementation.

Technical Skills

Design Tools: Figma, AI Assisted Design Tools, AI Prototyping Tools, Design Tokens, Component Libraries
UX Methods: UX Design, Interaction Design, Information Architecture, User Flows, Wireframes, Prototypes, High Fidelity Designs
UI & Accessibility: UI Design, Responsive Web Design, Mobile Design, Accessibility Standards (WCAG), Accessibility Audits
Design Systems: Design Systems, Design System Governance, DesignOps, Design Thinking
Research & Analytics: UX Research, Usability Testing, Product Analytics, Behavioral Data, Data-Driven Design, Human-Computer Interaction (HCI) Principles
Frontend Technologies: React, React Native
Enterprise Domains: Enterprise SaaS Design, Healthcare, Banking, Consulting
Collaboration: Strong Communication, Collaboration, Independent Work, Remote Work, Critical Thinking, Problem Solving, Adaptability, Time Management

Professional Experience

Role: Full stack Engineer - 2025-Sep - Present
Client: Kaiser Permanente – Atlanta, Ga, USA
Responsibilities:

- Mapped **user flows** for a HIPAA-compliant patient intake module in **Figma**, helping care teams complete registration faster and reducing dropped sessions during peak clinic hours.
- Drafted **wireframes** and **high fidelity designs** for a **React**-based clinical dashboard, making lab results and medication history readable for nurses with different screen sizes.
- Structured **information architecture** for a member portal serving millions of users, grouping benefits, claims, and care plans into clear sections that matched real patient questions.

- Created reusable **component libraries** and **design tokens** in **Figma**, which **cut** duplicate UI work for **React** and **React** Native screens across the **enterprise SaaS design** system.
- Tested **prototypes** with nurses and front desk staff, noting where they paused or clicked wrong, then adjusted layouts to reduce confusion during real appointments.
- Reviewed **behavioral data** and **product analytics** from the existing portal, spotting drop-off points in appointment scheduling and redesigning the flow to keep users on track.
- Configured accessibility checks against WCAG standards, fixing contrast, focus order, and screen reader labels so members with disabilities could complete tasks independently.
- Collaborated with Product Managers and Engineers in remote sprint meetings, translating clinical requirements into **interaction design** specs that developers could build without guesswork.
- Updated **design system governance** notes and component usage rules, so new designers and developers could contribute without breaking existing patterns in production.
- Integrated **AI assisted design tools** for rapid concept exploration, generating layout options for internal review and saving days of manual iteration during early discovery.
- Resolved UI bugs reported from **React** Native mobile builds, checking spacing, tap targets, and error states against **Figma** specs before each release cycle.
- Documented design handoff notes for **React** components, including props, states, and edge cases, which lowered back-and-forth between design and engineering during implementation.

Environment:
Figma, React, React Native, Design Systems, Component Libraries, Design Tokens, AI Assisted Design Tools, Product Analytics, Behavioral Data, WCAG, HIPAA, Responsive Web Design, Mobile Design, User Flows, Wireframes, Prototypes, High Fidelity Designs, Information Architecture, Interaction Design, UX Design, UI Design, Accessibility Audits, Design System Governance

Role: Software Engineer - 2023-Oct - 2025-Sep
Client: JPMorgan Chase – New York, NY, USA
Responsibilities:

- Analyzed **user flows** for a **banking** fraud alert dashboard, finding that customers ignored alerts because they lacked context, then redesigned the layout to show transaction details upfront.
- Produced **wireframes** and **prototypes** in **Figma** for a small business lending portal, helping product teams review loan application steps before any code was written.
- Organized **information architecture** for internal compliance tools, grouping audit trails, reports, and user roles so operations staff could **find** records without training sessions.
- Assembled a component library in **Figma** for **React** web applications, standardizing buttons, forms, and tables across multiple **banking** teams and reducing inconsistent UI patterns.
- Checked **usability testing** sessions with bank tellers and call center agents, recording where they hesitated and adjusting field labels and error messages to match real language.
- Examined **product analytics** and **behavioral data** from the existing portal, identifying where users abandoned wire transfers and simplifying the confirmation step.
- Applied WCAG accessibility standards to customer-facing pages, correcting keyboard navigation and screen reader output so visually impaired users could manage accounts online.
- Partnered with **DesignOps** and engineering teams in remote ceremonies, aligning **design tokens** and component naming with **React** code so handoff notes stayed accurate.
- Fixed **responsive web design** issues on tablet and mobile views, ensuring **banking** dashboards remained usable for customers checking balances on smaller screens.
- Wrote **design system governance** guidelines for component updates, helping designers and developers agree on versioning and review steps before pushing changes to production.

Environment:
Figma, React, Design Systems, Component Libraries, Design Tokens, Product Analytics, Behavioral Data, WCAG, Responsive Web Design, Mobile Design, User Flows, Wireframes, Prototypes, Information Architecture, Interaction Design, UX Design, UI Design, DesignOps, Design System Governance

Role: Junior Software Engineer - 2022-May - 2023-Jul
Client: Inviz AI – India
Responsibilities:

- Supported senior designers on **user flows** and **wireframes** for a **consulting** analytics tool, learning how to turn client requirements into clear screen layouts in **Figma**.
- Prepared **high fidelity designs** for **React** web pages, following existing design system patterns and checking spacing, colors, and fonts against component library standards.
- Participated in **usability testing** calls with consultants, taking notes on where they struggled and sharing findings with the design lead for iteration.
- Updated **information architecture** for a reporting module, reordering navigation items based on how consultants actually searched for client data during projects.
- Contributed to **accessibility audits** by checking color contrast and keyboard focus on internal dashboards, flagging issues for senior developers to fix before release.
- Documented design handoff notes and **Figma** component usage for **React** developers, helping reduce questions during sprint implementation and improving **consistency** across releases.

Environment:
Figma, React, Design Systems, Component Libraries, WCAG, User Flows, Wireframes, High Fidelity Designs, Information Architecture, UX Design, UI Design, Usability Testing, Accessibility Audits

Education

Master's in | Southeast Missouri State university (2025)
